PREFACE

With the advancement of technology, rapid globalization, diversified and multifaceted stimulants, children and young people are commonly intelligent and quick-minded.

As a part of the course curriculum and to deepen and widen the practical knowledge in the concept of “HTML”, I have made a project on the same.

Working on this project, I came to know and understand various aspects of the topic “Creative Plans”, at the same time the very importance of creativity and knowledge in student’s life.

I have expressed my experiences in my own simple way. I hope who goes through it will find it interesting and worth reading. All constructive criticism and feedback is cordially invited.

Siddhant Nagaria
10th – A

Acknowledgement

I am very thankful to everyone who all supported me, for I have completed my project effectively and moreover on time. I am overwhelmed in all humbleness and gratefulness to acknowledge my depth to all those who helped me to put these ideas well. I am equally grateful to my computer teacher – Mrs. Nishtha Mam. They gave me moral support and guided me in different matters regarding the topic – “Creative Plans” . With the help of their valuable suggestions, guidance and encouragement, I was able to perform this project work. Last but not the least, I would like to thank my parents who helped me a lot in gathering different information, collecting data and guiding me from time to time. Despite of their busy schedules, they gave me their precious time in making this project unique.

Siddhant Nagaria

Introduction

What is HTML ?

It stands for Hyper Text Markup Language. HTML is a complete code package that allows the user to create web pages. It includes text and graphics. Using HTML, we can add links to web pages.

Hyperlinks are the highlighted text segments or images that connect to other pages on the web. Let us analyze the word HTML.

HYPER TEXT : Hyper Text is the text used to link various web pages. It is the text on the web page, which on clicking opens a new web page.

MARK-UP : It means highlighting the text either by underlining or displaying it in different color, or both.

LANGUAGE : It refers to the way of communication between web pages, which has its own syntax and rules.

Now, what is a tag ?

HTML is a **Tag** based language. Tag is an element, which instructs the web browser, what to show and how to show. It shows the structure and appearance of a document or a web page that is created. The HTML tags or commands are inserted before and after the text written by user to indicate its format and location on the page. We can use various attributes in the tags that contain additional information like formatting effects,

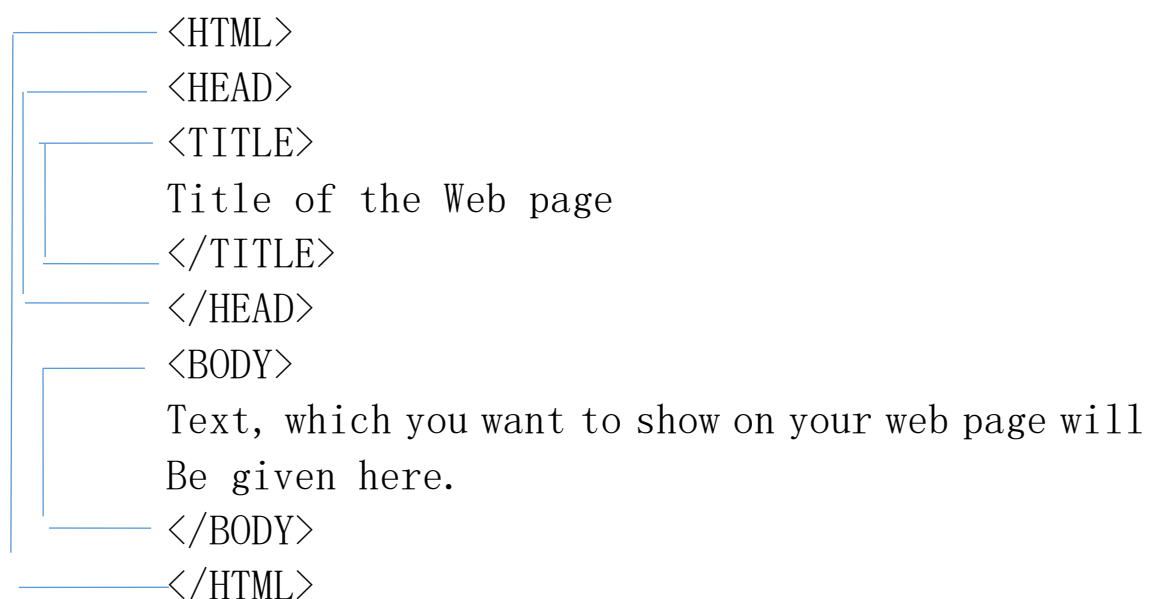

alignments, colors, etc. Each tag giving a specific instruction is enclosed in angle brackets `<>`.

HTML document structure

The general structure of an HTML document has two sections : **Head** and **Body**.

HEAD SECTION : The Head section contains the Title that identifies the first part of an HTML coded document.

BODY SECTION : The body section is where we do most of the work. It includes text, graphics, and other HTML elements that provide control and formatting of a page like : fonts, paragraph, list and other elements. The general format of an HTML document is :

Some Important Tags

1. HEADING - <H1></H1> to <H6></H6>
2. PARAGRAPH - <P></P>
3. CENTER - <CENYTER></CENTER>
4. FONT -
5. BODY - <BODY BGCOLOR = “” ></BODY>

<b><i><u>
Deliberate and Cognitive

```

</i></u>

Creative types who are deliberate and cognitively-based are purposeful. They possess a lot of knowledge about a particular subject and combine that with their skills and abilities to put a plan into action. People with this type of creativity are usually adept at research, experimentation and problem-solving. This type of creativity lies in the brain's prefrontal cortex toward the front of the brain.

This quadrant is frequently represented by noted inventor Thomas Edison, who we have to thank for advances in electricity and telecommunications. Edison was noted for the amount of time he spent analyzing his experiments and persevering until he reached his goal.

<i><u>

Deliberate and Emotional

</i></u>

Creative people who are classified as deliberate and emotional, according to Dietrich, let their work be influenced by their emotions. These are frequently more sensitive and feeling individuals who might prefer lots of quiet time for personal reflection or writing in a diary. But, they are also equally logical and rational, marrying deliberate actions with emotional creativity. This type of creativity lies in the brain's amygdala, responsible for human emotion, and cingulate cortex, which combines learning and information processing.

This quadrant is indicative of those ''A-Ha!'' moments, quick bursts of sudden realization or insight into a problem or idea. An example of this might come following a personal incident like a bankruptcy, where you're reflecting on the decisions that got you to that point and using deliberate and emotional creativity to reflect and overcome your challenge.

<i><u>

Spontaneous and Cognitive

</i></u>

Remember the story of a young Isaac Newton whose ''Eureka!'' moment about the law of gravity came after being hit on the head by a falling apple? This is an example of a spontaneous and cognitive type of creative being. Spontaneous and cognitive creativity appears when individuals have the knowledge necessary to get the job done, but perhaps need inspiration to drop from the sky (a la Newton).

This type of creativity may appear at the most inconvenient time, like coming up with a unique way to finish a story while you're in the shower or envisioning a solution to a problem at work while you're driving on the weekend.

<b><i>
Handicraft
</b></i>
</font>
<br><br>
<font face = "times new roman" size = "5">
A <b>handicraft</b>, sometimes more precisely expressed as <b>artisanal
handicraft</b> or <b>handmade</b>, is any of a wide variety of types of
work where useful and decorative objects are made completely by hand or
by using only simple tools. It is a traditional main sector of craft, and
applies to a wide range of creative and design activities that are related
to making things with one's hands and skill, including work with textiles,
moldable and rigid materials, paper, plant fibers, etc. One of the world's
oldest handicraft is Dhokra; this is a sort of metal casting that has been
used in India for over 4,000 years and is still used. Usually the term
is applied to traditional techniques of creating items (whether for
personal use or asproducts) that are both practical and
aesthetic. Handicraft industries are those that produces things with hands
to meet the needs of the people in their locality. Machines are not used.
<br>
Collective terms for handicrafts include <b>artisanry</b>,
<b>handicrafting</b>, <b>crafting</b>, and <b>handicraftsmanship</b>.
<br>
The term <b>arts and crafts</b> is also applied, especially in the United
States and mostly to hobbyists' and children's output rather than items
crafted for daily use, but this distinction is not formal, and the term
is easily confused with the Arts and Crafts design movement, which is in
fact as practical as it is aesthetic.
<br>
Handicrafting has its roots in the rural crafts —the material-goods
necessities—of ancient civilizations, and many specific crafts have been
practiced for centuries, while others are modern inventions, or
popularizations of crafts which were originally practiced in a limited
geographic area.

```

</p>

<p>

Many handicrafters use natural, even entirely indigenous, materials while others may prefer modern, non-traditional materials, and even upcycle industrial materials. The individual artisanship of a handcrafted item is the paramount criterion; those made by mass production or machines are not handcraft goods.

</p>

<p>

Seen as developing the skills and creative interests of students, generally and sometimes towards a particular craft or trade, handicrafts are often integrated into educational systems, both informally and formally. Most crafts require the development of skill and the application of patience, but can be learned by virtually anyone.

</p>

<p>

Like folk art, handicraft output often has cultural and/or religious significance, and increasingly may have a political message as well, as in craftivism. Many crafts become very popular for brief periods of time (a few months, or a few years), spreading rapidly among the crafting population as everyone emulates the first examples, then their popularity wanes until a later resurgence.

The Art and Crafts movements in the World

The Arts and Crafts movement originated as a late 19th-century design reform and social movement principally in Europe, North America and Australia, and continues today. Its proponents are motivated by the ideals of movement founders such as William Morris and John Ruskin, who proposed that in pre-industrial societies, such as the European Middle Ages, people had achieved fulfillment through the creative process of handicrafts. This was held up in contrast to what was perceived to be the alienating effects of industrial labor. Works Progress Administration, Crafts Class, 1935.

These activities were called crafts because originally many of them were professions under the guild system. Adolescents were apprenticed to a master craftsman, and refined their skills over a period of years in exchange for low wages. By the time their training was complete, they were well equipped to set up in trade for themselves, earning their living with the skill that could be traded directly within the community, often for goods and services. The Industrial Revolution and the increasing mechanization of production processes gradually reduced or eliminated many of the roles professional craftspeople played, and today many handicrafts are increasingly seen, especially when no longer the mainstay of a formal vocational trade, as a form of hobby, folk art and sometimes even fine art.

In Modern Education

Simple "arts and crafts" projects are a common elementary and middle school activity in both mainstream and alternative education systems around the world.

In some of the Scandinavian countries, more advanced handicrafts form part of the formal, compulsory school curriculum, and are collectively referred to as slöjd in Swedish, and käsityö or veisto in Finnish. Students learn how to work with mainly metal, textile and wood, not for professional training purposes as in American vocational - technical schools, but with

the aim to develop children's and teens' practical skills, such as everyday problem-solving ability, tool use, and understanding of the materials that surround us for economical, cultural and environmental purposes.

Secondary schools and college and university art departments increasingly provide elective options for more handicraft-based arts, in addition to formal "fine arts", a distinction that continues to fade throughout the years, especially with the rise of studio craft, i.e. the use of traditional handicrafting techniques by professional fine artists.

Many community centers and schools run evening or day classes and workshops, for adults and children, offering to teach basic craft skills in a short period of time.

List of Common Handicrafts

There are almost as many variations on the theme of handicrafts as there are crafters with time on their hands, but they can be broken down into a number of categories:

Using textiles or leather

<ol type = "I">

bagh prints

canvas work

banner making

cross stitch

calligraphy

crochet, etc.

Using wood, metal, clay, bone, horn, glass, or stone

<ol type = "I">

<b>Sales Venues</b>
</font>
<br>

Handicrafts are often made for home use.If sold, they are sold in direct
sales, gift shops, public markets, and online shopping. In developing
countries, handicrafts are sold to locals and as souvenirs to tourists.
Sellers tend to speak at least a few words of common tourist languages.
There are also specialty markets such as:
<ul>

<b><i><h1>ORIGAMI</h1></b></i>
</font>
Origami (ori meaning "folding", and kami meaning "paper" (kami changes
to gami due to rendaku)) is the art of paper folding, which is often
associated with Japanese culture. In modern usage, the word "origami" is
used as an inclusive term for all folding practices, regardless of their
culture of origin. The goal is to transform a flat square sheet of paper
into a finished sculpture through folding and sculpting techniques.
Modern origami practitioners generally discourage the use of cuts, glue,
or markings on the paper. Origami folders often use the Japanese word
kirigami to refer to designs which use cuts, although cutting is more
characteristic of Chinese papercrafts.

<b>Mehndi Design</b>
</font>
<br>
```

```
<font size = "5">
```

Mehndi, mehendi or henna is a form of body art from India, Pakistan, Arabia and the Arab world in which decorative designs are created on a person's body, using a paste, created from the powdered dry leaves of the henna plant (*Lawsonia inermis*). Ancient in origin, mehndi is still a popular form of body art among the women of the Indian Subcontinent, Africa and the Middle East.

```
<br>
```

Mehndi is derived from the Sanskrit word mendhika. The use of mehndi and turmeric is described in the earliest Hindu Vedic ritual books. It was originally used for only women's palms and sometimes for men, but as time progressed, it was more common for men to wear it. Haldi (staining oneself with turmeric paste) as well as mehndi are Vedic customs, intended to be a symbolic representation of the outer and the inner sun. Vedic customs are centered on the idea of "awakening the inner light". Traditional Indian designs are representations of the sun on the palm, which, in this context, is intended to represent the hands and feet. Mehendi has a great significance in performing classical dance like bharatnatyam.

CREATIVE PLANS

By:- SIDDHANT NAGARIA
10th A

Creative planning is a deliberative technique often embedded within a larger participatory planning process. It's goal is to relieve participants of practical or analytical constraints so that brainstorming and idea generation can flow organically without worrying that one is straying too far 'outside the box'.

To be creative, you just need few thing to remember. They are-

1. Deliberations, Decisions and Public interactions
2. Influence, Outcomes and Effects
3. Analysis and Lessons learned

The diagram illustrates the Strategic Planning Cycle as a continuous loop. It starts with 'Goals' (red box) at the top, leading to 'Desired Outcomes' (green box) on the right, then 'Strategies' (purple box) at the bottom, then 'Measures & Targets' (blue box) on the left, and finally 'Results' (orange box) back to 'Goals'. A central yellow circle labeled 'Innovation' is surrounded by these steps. Arrows indicate the flow between each stage, with small text labels like 'How do we measure it?' and 'How do we know it?' along the arrows.

There are many types of Creative Plans. Few of them are given below :-

- a. [Adult Based](#)

ow, over here , I am going to tell you about Adult Based Creative Plans.

- a. [Deliberate and Cognitive](#)
- b. [Deliberate and Emotional](#)
- c. [Spontaneous and Cognitive](#)

Just click on the above links to know more. !!!!

	Cognitive	Emotional
Deliberate	Thomas Edison	Therapeutic A-Ha Moments
Spontaneous	Newton & The Apple	Artists & Musicians

Deliberate and Cognitive

Creative types who are deliberate and cognitively-based are purposeful. They possess a lot of knowledge about a particular subject and combine that with their skills and abilities to put a plan into action. People with this type of creativity are usually adept at research, experimentation and problem-solving. This type of creativity lies in the brain's prefrontal cortex toward the front of the brain.

This quadrant is frequently represented by noted inventor Thomas Edison, who we have to thank for advances in electricity and telecommunications. Edison was noted for the amount of time he spent analyzing his experiments and persevering until he reached his goal.

Deliberate and Emotional

Creative people who are classified as deliberate and emotional, according to Dietrich, let their work be influenced by their emotions. These are frequently more sensitive and feeling individuals who might prefer lots of quiet time for personal reflection or writing in a diary. But, they are also equally logical and rational, marrying deliberate actions with emotional creativity. This type of creativity lies in the brain's amygdala, responsible for human emotion, and cingulate cortex, which combines learning and information processing.

This quadrant is indicative of those "A-Ha!" moments, quick bursts of sudden realization or insight into a problem or idea. An example of this might come following a personal incident like a bankruptcy, where you're reflecting on the decisions that got you to that point and using deliberate and emotional creativity to reflect and overcome your challenge.

Spontaneous and Cognitive

Remember the story of a young Isaac Newton whose "Eureka!" moment about the law of gravity came after being hit on the head by a falling apple? This is an example of a spontaneous and cognitive type of creative being. Spontaneous and cognitive creativity appears when individuals have the knowledge necessary to get the job done, but perhaps need inspiration to drop from the sky (a la Newton).

This type of creativity may appear at the most inconvenient time, like coming up with a unique way to finish a story while you're in the shower or envisioning a solution to a problem at work while you're driving on the weekend.

Handicraft

A **handicraft**, sometimes more precisely expressed as **artisanal handicraft** or **handmade**, is any of a wide variety of types of work where useful and decorative objects are made completely by hand or by using only simple tools. It is a traditional main sector of craft, and applies to a wide range of creative and design activities that are related to making things with one's hands and skill, including work with textiles, malleable and rigid materials, paper, plant fibers, etc. One of the world's oldest handicraft is Dhokra, this is a sort of metal casting that has been used in India for over 4,000 years and is still used. Usually the term is applied to traditional techniques of creating items (whether for personal use or as products) that are both practical and aesthetic. Handicraft industries are those that produces things with hands to meet the needs of the people in their locality. Machines are not used. Collective terms for handicrafts include **arts and crafts**, **handicrafting**, **crafting**, and **handcraftsmanship**. The term **arts and crafts** is also applied, especially in the United States and mostly to hobbyists' and children's output rather than items crafted for daily use, but this distinction is not formal, and the term is easily confused with the Arts and Crafts design movement, which is in fact as practical as it is aesthetic. Handicrafting has its roots in the rural crafts—the material goods necessities—of ancient civilizations, and many specific crafts have been practiced for centuries, while others are modern inventions, or popularizations of crafts which were originally practiced in a limited geographic area.

Many handicrafters use natural, even entirely indigenous, materials while others may prefer modern, non-traditional materials, and even upcycle industrial materials. The individual artisanship of a handicrafted item is the paramount criterion, those made by mass production or machines are not handicraft goods.

Seen as developing the skills and creative interests of students, generally and sometimes towards a particular craft or trade, handicrafts are often integrated into educational systems, both informally and formally. Most crafts require the development of skill and the application of patience, but can be learned by virtually anyone.

Like folk art, handicraft output often has cultural and/or religious significance, and increasingly may have a political message as well, as in craftivism. Many crafts become very popular for brief periods of time (a few months, or a few years), spreading rapidly among the crafting population as everyone emulates the first examples, then their popularity wanes until a later resurgence.

Origami (ori meaning "folding", and kami meaning "paper" (kami changes to gami due to rendaku)) is the art of paper folding, which is often associated with Japanese culture. In modern usage, the word "origami" is used as an inclusive term for all folding practices, regardless of their culture of origin. The goal is to transform a flat square sheet of paper into a finished sculpture through folding and sculpting techniques. Modern origami practitioners generally discourage the use of cuts, glue, or markings on the paper. Origami folders often use the Japanese word kirigami to refer to designs which use cuts, although cutting is more characteristic of Chinese papercrafts.

MEHNDI DESIGN

Mehandi Design

Mehndi, mehendi or henna is a form of body art from India, Pakistan, Arabia and the Arab world in which decorative designs are created on a person's body, using a paste, created from the powdered dry leaves of the henna plant (*Lawsonia inermis*). Ancient in origin, mehndi is still a popular form of body art among the women of the Indian Subcontinent, Africa and the Middle East.

Mehndi is derived from the Sanskrit word mendhika. The use of mehndi and turmeric is described in the earliest Hindu Vedic ritual books. It was originally used for only women's palms and sometimes for men, but as time

progressed, it was more common for men to wear it. Haldi (staining oneself with turmeric paste) as well as mehndi are Vedic customs, intended to be a symbolic representation of the outer and the inner sun. Vedic customs are centered on the idea of "awakening the inner light". Traditional Indian designs are representations of the sun on the palm, which, in this context, is intended to represent the hands and feet. Mehendi has a great significance in performing classical dance like bharatnatyam.
